

Press Release

IP500 Alliance

DKE / VDE announced NormungsRoadmap Version 2.0 for SmartHome & Building applications

In cooperation with the DKE / VDE (official German institute for communication) the IP500 Alliance has been able to present their solution in the new released document called "SmartHome & Building Applications version 2.0". This document is a good overview and a guideline for architects, planners, system integrators what is available as standards for smart homes and buildings and how can these standards be used in specific applications

The Version 2.0 is now available in German language, and will be translated in the near future in English.

This Roadmap will have a strong influence on international organization.

Berlin, 02.10.2015

About the IP500 Alliance

The IP500® Alliance is an international industry Association launched by leading manufacturers (OEMs), users and operators. It has set itself the target of jointly defining, developing, and providing a secure and vendor-neutral wireless communication platform for smart sensing devices for building, home as well as city applications. The new IP500® platform will thereby fulfill all of the technical requirements for secure, interoperable and cross-disciplinary networking of smart devices according to worldwide standards, like IPv6 / 6LoWPAN (IETF) and 802.15.4 (IEEE).

Today the IP500 Alliance has global OEMs as active members setting the international wireless Standard for smart Security & Safety devices in IoT 3.0 applications.
