

Press Release

IP500[®] Project

IP500[®] has been chosen for Smart-Office in New Delhi, India

One of the largest Smart-Office-Buildings worldwide, with total 12 office towers for approx. 45.000 people, has chosen the most scalable and secure IP500 Standard as “communication network” for the entire IBMS and sensor connectivity. The IP500 wireless Standard is set as “mandatory” for specified sensor & actuator applications in this project. The building planners are now working with the IP500 OEMs to integrate their IP500 solutions / products in the target applications, incl. building security (like access control in doors and elevators) as well as parking solutions for over 7000 cars.

About the IP500[®] Alliance

The IP500 Alliance is an international industry initiative of leading manufacturers, system integrators and users. The aim of the Alliance is to jointly define, develop and provide a manufacturer-neutral standard and most secure global IoT wireless platform for smart commercial buildings.

The IP500 platform guarantees maximum interoperability for the interdisciplinary and interdepartmental interplay of different smart IoT devices by using central, generally introduced and accepted industrial IoT standards. The IP500 standard is also the first and only wireless platform that meets security regulations according to DKE, EN and VdS for commercial building. It therefore ensures most robust communication between security and comfort applications such as smoke detection, intrusion / access control as well as light and motion sensors.

The IP500 Alliance is represented globally in Europe (Headquarters), USA, India & Asia.

Berlin, 19th March, 2018
